# 6 AI Prompts for Better Answers

Works with ChatGPT, Claude and Gemini. Copy a prompt, paste it into your AI chat, and replace anything in [brackets] with your own details.

🔒 **Privacy first:** Use dummy examples. Never upload confidential company reports, client data or personal details (PAN, Aadhaar, full salary slips) to an AI tool your company has not approved. When you paste numbers, remove names, employee IDs, PAN, account numbers and UPI IDs. **Never upload a full bank statement** — the amount and item are enough.

## 1 Explain like I'm 10 Any AI

Gets the AI to explain a difficult topic in simple words, step by step.

```
Explain [topic] like I'm 10 years old, step by step. Use one everyday example and avoid jargon.
```

**When:** When you don't understand an offer letter CTC, a salary slip, an insurance clause, a rent agreement, or terms like EMI and GST.
**Example:** "Explain this offer letter CTC breakup like I'm 10: [Basic, HRA, PF, gratuity, variable pay]. Which parts are usually not paid every month?"

This is for understanding only, not financial advice. Your in-hand salary depends on your tax regime and deductions, so confirm with HR, your payslip or the policy document.

## 2 Ask me 5 clarifying questions first Any AI

The AI learns about your situation before it answers, so you are less likely to get a generic reply.

```
Before you answer, ask me 5 clarifying questions about my situation. Wait for my answers, then respond.
```

**When:** Appraisal self-review, interview answers, email, plan.
**Example:** "Help me write my appraisal self-review. Before you answer, ask me 5 clarifying questions. Wait for my answers, then draft it using only what I tell you."

You must supply your own achievements. Double-check every number yourself.

## 3 Show an example (don't just say "professional") Any AI

Showing a good example guides the style and structure far better than vague words like "professional".

```
Here is an example of what good looks like: [paste example]. Make mine similar in structure, length and tone. Content: [your details].
```

**When:** Resume, LinkedIn summary, project report, client email.
**Example:** "Here is a sample resume I like: [paste]. Rewrite my resume [paste] using the same headings and section order. Keep all my facts exactly as they are."

Borrow the structure only — never copy someone else's wording. An exact match is not guaranteed, so review the output.

## 4 Save your context once (Memory) Claude · ChatGPT · Gemini

Save your role and preferences once, and you won't have to repeat them in every chat.

```
Please remember for future chats: I am a [role] with [X] years in [domain], my key skills are [skills], and I am preparing for [target role] interviews.
```

**For repeated tasks (Claude Skills):**

```
I want to create a skill for interview prep. When I paste a job description, it should give me [10 likely questions, a 3-line answer outline for each, and 3 questions I can ask]. Ask me what you need to know, then build the skill.
```

**Claude:** Memory is on by default on Free, Pro and Max (on Team/Enterprise, your admin decides). Check Settings > Memory to confirm what was saved. For Skills, turn on Settings > Capabilities > "Code execution and file creation", then enable the skill in Customize > Skills.
**ChatGPT / Gemini:** Both have memory or saved-info settings too. Menu names can change, so check your own settings. Nothing is guaranteed to be saved.

## 5 Don't stop until... (define "done") Any AI

Give a clear list of what "done" means, and ask the AI to check against it before replying.

```
[Task]. Don't stop until: [criteria 1], [criteria 2], [criteria 3]. Check your answer against each point before you reply.
```

**Example (expenses):** "Here are my October expenses: [date, item, amount]. Sort them into Food, Bills, Travel, Family, Education, Other. Don't stop until every item has a category, you show items done / total, and category totals add up to the grand total."

- **Jobs:** A match score, top 3 matching skills and 2 missing skills for all 10 job descriptions (the score is only the AI's opinion).
- **Study:** 30 MCQs from a chapter, using only what I pasted.
- **Office:** Client email under 150 words, one proof point, one clear next step.

With long lists the AI may stop halfway — if the count falls short, say "continue". Check the totals yourself.

## 6 Find my blind spots ⭐ Any AI

AI assistants tend to agree with whatever we say. This is called "sycophancy", and Anthropic's 2023 research found it in all 5 assistants tested. This prompt helps you find the weak points in your plan.

```
Find my blind spots and weak assumptions in this [plan/idea/email]. Be direct. Don't
just agree with me. List the top risks and what I should check.
```

**When:** Before a big decision: a job switch, a business idea or a proposal.
**Example:** "I'm planning to switch from [current role] to [new role] in 6 months. Here is my plan: [plan]. Find my blind spots and weak assumptions."

> The AI may miss some risks or invent problems that aren't there — the final decision is yours.

**Don't just use AI to say yes. Use it to make you think.**

---

**Notes:** Claude plan details checked 23 Oct 2026 (support.claude.com). Features and menu names change — check your own settings. Research: Anthropic, "Towards Understanding Sycophancy in Language Models" (Oct 2023), anthropic.com/research/towards-understanding-sycophancy-in-language-models. Never paste confidential work data.
